

POSITIONING

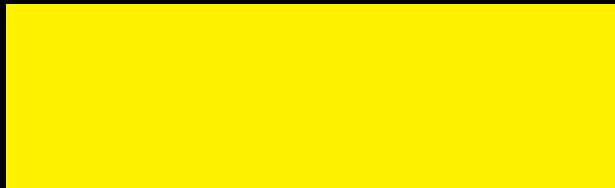

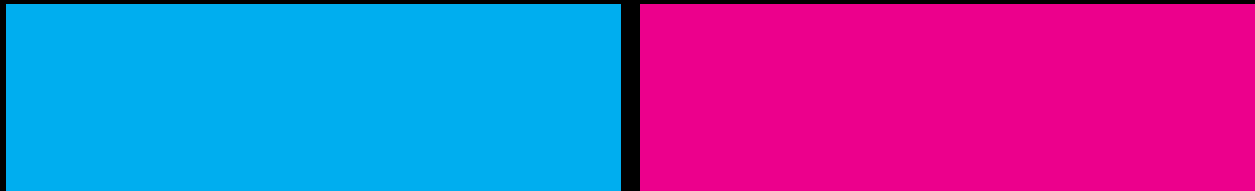

STATIC

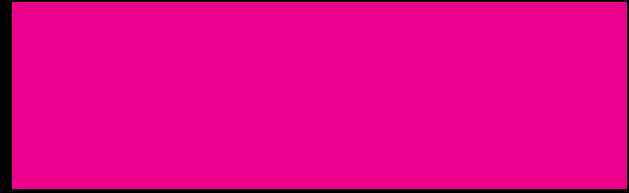

The normal positioning scheme in which elements are positioned as they occur in the normal document flow.

RELATIVE

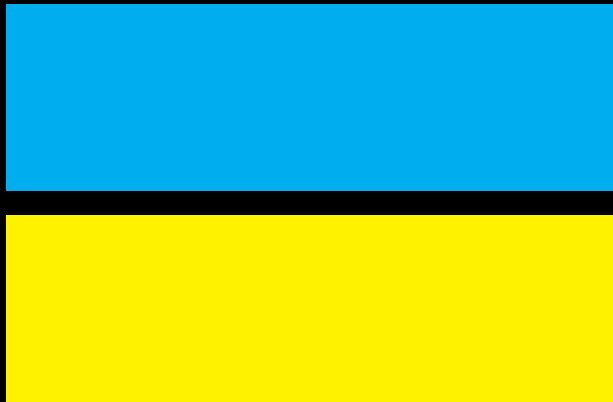

Moves the box relative to its original position in the flow.

ABSOLUTE

Removed from the document flow entirely and positioned with respect to the browser window or a containing element.

FIXED

Element stays in one position in the window even when the document scrolls.

position: value;

top: #px;

left: #px;

Z-INDEX

Changing the visual stacking order on the z-index.
